

• the permanent maxillary right central incisor

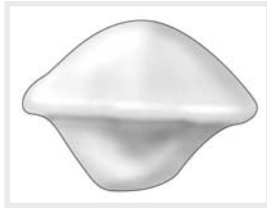

Remember:

- The crown is the **longest** (10.5 mm) and **widest** (8.5 mm) incisor tooth. It is the **most prominent tooth** in the mouth. The crown outline is **wider mesiodistally** (8.5 mm) than **faciolingually** (7.0 mm).
- The mesial curvature of the cervical line is **larger** (3.5 mm) than any other tooth. The cingulum is well-developed and is located **off-center toward the distal**.
- ~~The maxillary central incisors have the narrowest incisal embrasures.~~
